

Reynolux[®]
Building

Aesthetic & durable at once.

The weather conditions in northern Portugal put extreme stresses on any façade. That's why Inove Plastika in Barcelos made the decision to clad its new building with 800 m² of Reynolux[®] with PVDF 70/30 coating.

Reynolux[®] is a coil-coated aluminium sheet that is outstandingly well suited for construction. Reynolux[®] has many points to its advantage: high resistance to climatic influences; practical, easy fabrication; a long warranty; as well as a wide range of coatings and colours. That's what makes Reynolux[®] the product of choice for designers and contractors working with wall, roof and trim accessories.
