

Reynobond[®]
Architecture

Better than the original

There is finally an alternative to wood and laminate – the first aluminium composite panels in a Wood Design.

They present you with numerous creative design options that wood or HPL plates simply cannot provide. Yet at the same time you benefit from all the factors that make Reynobond[®] Architecture stand out: top quality, low weight, high durability against environmental influences and perfect service.

Wood is the 'In Thing' right now – a trend that we recognised early and helped shape through our Wood Design from Reynobond[®] Architecture.

We've developed three innovative colours with our exclusive DURAGLOSS[®] 5000 coating – Honey Pear, Colonial Red and Mahogany Brown – to optimally match up with the demands of the market. Wood Design from Reynobond[®] Architecture retains its premiere elegance over the long term and is exceptionally low maintenance.
