

INBOUND LOGISTICS

You Name It, They Provide It

Inbound Logistics is proud to present the 2009 Top 100 Logistics IT Providers list. We publish this list every April to help you find solutions providers who are ready and able to meet your logistics IT challenges, whatever they may be. Need help with global trade management and 10+2 compliance? Sustainability issues? Visibility? TMS? Leading companies providing those solutions, and many others, are on the list.

How We Chose the Top 100 Companies

The Top 100 Logistics IT Providers list is compiled with you in mind. We know you have a broad range of IT needs, so this list assembles the best from a cross-section of technology solutions on the market today.

The *Inbound Logistics* selection committee chose this year's qualifiers from a pool of more than 300 applicants, using questionnaires, online research, scorecards, and personal interviews to validate our picks. We look for companies where logistics and supply chain solutions are a core business, and where shipper successes are earned and embraced. The list includes a mix of logistics solutions companies, from legacy WMS providers to niche SaaS vendors; start-ups courting SMBs and upstarts with Fortune 500 accounts. The companies chosen reflect the diverse IT needs of large, mid-range, and small businesses: ***simplicity, ROI, efficient implementation, and a dual emphasis on best-of-breed or end-to-end solutions.***
