Technical Bulletin
Sprinter 3500 Rear Wheel Stud Thread Engagement

July 28, 2008

This technical bulletin is intended to address recent inquiries and provide fitment clarification. Alcoa Wheel and Transportation Products has introduced the 250800/1/2, a 16 x 5.5 J Type forged aluminum wheel for the Daimler 3500 Sprinter chassis, model year 2007 to present. This wheel is designed to be used with a steel wheel in the inner dual position to assure robust thread engagement, and does not require OEM stud change out. Do not use aluminum wheels in both inner and outer dual positions.

The Alcoa 25080X wheel is not designed for use on the Sprinter 2500 chassis.

For more information, call 800-242-9898 Ext. 4566
