Alcoa Wheel Products does not recommend use of any type of tire balancers, tire sealants, or any other similar compounds in the tire/wheel cavity. The use of balancers or sealants may cause extremely rapid corrosion of the wheel rim surface. Severely corroded wheels are unsuitable for service and should immediately and permanently be removed from service.

Alcoa wheels corroded by the use of tire balancers, sealants or other similar compounds will not be replaced under the Alcoa limited warranty. Alcoa does not test these products and does not recommend their use. The user of these products and/or the vendor of these materials are responsible for verifying that such products do not damage aluminum and thus void the Alcoa wheel limited warranty.
