

OVERWEIGHT?

Alcoa forged aluminium wheels will save you up to 400 kg !

Alcoa forged aluminium wheels are up to 50% lighter than steel wheels and up to 20% than cast aluminium.

Due to their lower weight, they offer significant advantages such as more loading capacity, increased efficiency in fuel consumption and less wear on suspension and shock absorbers.

Moreover, Alcoa forged aluminium wheels are exceptionally strong and durable ! During deformation tests, they prove to be 5 times stronger than steel wheels.

The lightest, the strongest
