

alcoa and aluminium ... part of the solution

emissions reduction

Since 1990 Alcoa's Victorian operations have reduced direct emissions by almost 60 per cent, indirect emissions associated with electricity use by almost 3 per cent and total emission intensity by 20 per cent.

More specifically, Alcoa Australia Rolled Products' greenhouse intensity has improved by about 24 per cent since 1990 through energy savings and productivity improvements.

Alcoa Australia Rolled Products is proud to be part of the solution.
