

He's working for  
his family's future.  
And yours.

At Alcoa, we've taken a voluntary global leadership position on addressing climate change. That's why we've reduced our greenhouse gas emissions to 36 percent below 1990 levels. We're also the largest aluminium recycler in Australia. In fact, our recycling facility in Yennora, New South Wales, recycles 70,000 tonnes of aluminium each year. This is good news for our future generations because recycling aluminium saves energy and reduces landfill. To find out more, visit [www.alcoa.com.au](http://www.alcoa.com.au) today.

australia's aluminium

Eugene Westaway. Potroom Operator, Alcoa Point Henry, VIC.
