

alcoa and aluminium ... part of the solution

Portland Aluminium emissions reduction

Since 1990 Alcoa's Victorian operations have reduced direct emissions by almost 60 per cent, indirect emissions associated with electricity use by almost 3 per cent and total emission intensity by 20 per cent.

More specifically, Alcoa's Portland smelter has achieved a 48 per cent reduction in on-site greenhouse gas intensity since 1990, while at the same time increasing production by nearly 11 per cent.

Alcoa is proud to be part of the solution.
