

alcoa and aluminium ... part of the solution

Alcoa Point Henry emissions reduction

Since 1990 Alcoa's Victorian operations have reduced direct emissions by almost 60 per cent, indirect emissions associated with electricity use by almost 3 per cent and total emission intensity by 20 per cent.

More specifically, Alcoa's Point Henry smelter in Geelong has achieved a 65 per cent reduction in on-site greenhouse gas intensity since 1990, while at the same time increasing production by nearly 5 per cent.

Alcoa is proud to be part of the solution.
