

alcoa and aluminium ... part of the solution

recycling

Alcoa believes recycling has an important part to play in the solution to global climate change. Taryn Nobbs is an operator at Alcoa Australia Rolled Products' recycling facility in Yennora NSW where around 55,000 tonnes of aluminium and about half a billion cans are recycled each year.

An aluminium can recycles 100 per cent back into another aluminium can while only using 5 per cent of the energy needed to make a new can from scratch.

Taryn and Alcoa Australia Rolled Products are proud to be part of the solution.
