

Which Car?

Buying a car is a big decision. You need to think about functionality, affordability, environmental factors – and you have to like the thing!

In recent years, the environmental aspect has become more important, with the two important considerations being greenhouse gas emissions and fuel consumption.

Check out the Australian Government's green vehicle guide on the website below.
www.greenvehicleguide.gov.au

Select four cars and draw up a table showing the information on each.

Choose a car that you believe is the best for the environment and write a paragraph outlining your reasons why.
