

## Design a Crusher

### Topic: Mining

### Background Information

The Huntly mine site is 26km from the Pinjarra Refinery. When bauxite has been extracted it is transported to a crusher. This large piece of equipment crushes rocks, enabling them to be transported on the conveyor to the refinery.

### You Will Need

- A3 paper
- Pencil
- Ruler

### What You Need to Do

Design a piece of equipment to crush Smarties or M&Ms.

### Extension/ Alternatives

- Modify the design to utilise materials that are readily available.
- Construct the crusher and test how well it works.
- Design and build a conveyor to transport the material that has been crushed.

### Final Question

How well did the crusher work?

What modifications could improve performance?
