MARKET RELEASE MODEL 4801 HYDRAULIC INSTALLATION TOOL

Model 4801 is a new hydraulic installation tool designed to replace the Model 24800 to install Huck Blind Fasteners and HUCKBOLT® Fasteners.

The Model 4801 utilizes the same nose assemblies as the Model 4800 H.I.T. as shown in SELECTION CHARTS, Form 461.

The hydraulic hoses screw into the bottom of the cylinder, thereby eliminating face seals and a handle shield.

The Model 4801 operates on 5400-5700 psi PULL pressure and 2200-2400 psi RETURN pressure as supplied by Huck Hydraulic POWERIGS.®

Model 4801 Hydraulic Installation Tool includes tool, handle, hoses and quick-disconnects. Nose assemblies must be ordered separately.
