MARKET RELEASE MODEL 5901 HYDRAULIC INSTALLATION TOOL

Model 5901 is a new hydraulic installation tool designed to replace the Model 25900 to install Huck Blind Fasteners and HUCKBOLT® Fasteners.

The Model 5901 utilizes the same nose assemblies (H99-) as the model 5900 H.I.T. as shown in SELECTION CHARTS, Form 461.

The hydraulic hoses screw into the bottom of the cylinder, thereby eliminating face seals and a handle shield.

The Model 5901 operates on 5400-5700 psi PULL pressure and 2200-2400 psi RETURN pressure as supplied by Huck Hydraulic POWERIGS.®

Model 5901 Hydraulic Installation Tool includes tool, handle, hoses and quick-disconnects. Nose assemblies must be ordered separately.
