**Important Notice
Pintail Deflector Retention**

In order to insure the proper function and safety levels of Huck tooling it is important to have the Pintail Deflector in proper working order.

The following are recommended procedures to be used during operation and maintenance of Huck tooling.

- Periodically tighten Deflector Clamp to obtain proper retention to tool. This should be done during any tool servicing and on occasion during operation.
- Check deflector for any damage or cracking. If this condition occurs, replace with new deflector.
- **NEVER** use Pintail Deflector as a handle during fastener installation or in tool transportation. Operator injury or deflector damage may occur.
