Subject: RE: Narrows Draft Tube Valves - DO Enhancement

We need to clarify what FERC's expectations were of us when this was installed, what we have represented in negotiations, and what the future will look like. Fundamentally, those of us negotiating had a new learning the other day. The draft tube does not work when the unit is operated less than 20MW and the unit operates below that regularly. The state does not know that, but in the future compliance world (and possibly our present world), the expectation will be (is) that if the unit operates, DO enhancement is occurring.
