

Alcoa and Western Australia

A major economic contributor

Alcoa's economic contribution to Western Australia extends well beyond its mining and refining, directly generates operations in the Peel region.

Over decades of operation, Alcoa has developed deep and expansive supply chains that create employment and ongoing investment throughout the State, supporting a total contribution of \$8.2 billion in economic output and generating 11,310 jobs, according to an independent economic analysis commissioned by Alcoa.

Alcoa's contribution to the Western Australian economy

A defining feature of Alcoa's contribution to Western Australia is the scale and depth of its engagement with local businesses. Value flows through the broader economy in the form of wages, payments to local suppliers, taxes, royalties, and community investment.

This is through direct business, second and third-tier suppliers across engineering, transport and logistics, maintenance, energy, professional services, and specialist contracting.

Alcoa's direct, indirect and induced activities provide an important economic contribution to Western Australia.

Orizontas, Alcoa Australia: A valuable economic partnership

Working with Orizontas, Alcoa commissioned a study to model its broader economic contribution at the national, state and local level.

Using the REMPLAN Input–Output model, Orizontas analysed Alcoa's operational and financial data for 2023-24 to measure broader economic value created as these direct contributions flow through regional economies. While still operational at this time, in broad terms the Kwinana Refinery's economic contribution was excluded from the study to better represent Alcoa's current economic impact.

All figures are in AUD and are based on Alcoa's data from the 2023-24 financial year.
