

Here for Australia

Our end product, aluminium, is essential to everyday life, a key metal in the green energy future and 100% recyclable.

For more than 60 years, we have been producing aluminium in Australia. In 2024, our two bauxite mines and three alumina refineries in Western Australia produced about 45% of Australia's alumina and our Portland Aluminium Smelter* in Victoria produced 19% of the nation's aluminium. We are leaders in mine site rehabilitation and proud of the thousands of employees committed to continuous improvement in all areas of our business. We strive to create lasting value for all stakeholders, including local communities near where we operate. Alcoa - we are here for Australia, and here for the future.
