Our flagship product, aluminium, is the world’s most versatile metal. It is strong, flexible, impermeable, corrosion resistant and 100% recyclable making it an essential part of our modern world.

Alcoa has been producing aluminium in Australia for almost 60 years and our operations represent the entire product value chain from bauxite mining to alumina refining and aluminium smelting.

Two bauxite mines and three alumina refineries in Western Australia produce nearly 50 per cent of Australia’s alumina. And Portland Aluminium Smelter* in Victoria produces approximately 19 per cent of the nation’s aluminium.

We employ thousands of people, predominantly in regional communities, and add value to Australia’s local, state and national economies at every stage.
